SUMMARY

Motivated and detail-oriented Information Technology undergraduate at SLIIT with strong hands-on expertise in Full-Stack Web Development (MERN, Java/Spring Boot), Mobile Application Engineering (Kotlin/Android), and intuitive UI/UX Design (Figma). Proficient in building user-centric interfaces, scalable backends, and cloud-ready applications with an active focus on CI/CD pipelines, DevOps workflows, and Quality Assurance methodologies. Proven ability to take digital products from user research and wireframing to full-stack implementation across academic and real-world projects. Eager to secure a Internship to contribute to impactful digital solutions while continuously learning in a collaborative environment.

TECHNICAL SKILLS

- **Programming Languages:** Java, JavaScript, PHP, Kotlin, Python, C++, C
- **Frontend Development:** React.js, HTML5, CSS3, Tailwind CSS, Three.js
- **Backend & Frameworks:** Node.js, Express.js, Spring Boot, RESTful APIs, JSP/Servlets
- **Mobile Development:** Android (Kotlin), MVVM Architecture, Android Studio
- **Databases:** MongoDB (Atlas), MySQL, Oracle SQL
- **DevOps & Cloud Tools:** Git, GitHub, Linux / WSL, Docker (Basics), Apache Tomcat, Postman
- **Quality Assurance & Testing:** Manual Testing, Unit Testing , API Testing (Postman), Test Case Writing
- **UI/UX & Design:** Figma (Wireframing, Prototyping, Usability Testing)
- **Soft Skills:** Communication, Teamwork, Problem-solving, Time Management, Attention to Detail

EDUCATION

BSc (Hons) in information Technology - Sri Lanka Institute of Information Technology (SLIIT) | 2023-present

G.C.E.Advanced Level - Technology Stream(2021)

PROJECTS

Grocery Ordering System | HTML, CSS, JavaScript, PHP, Eclipse, Apache Tomcat

- Developed user authentication, product browsing, and order management features.
- Integrated database support for inventory, cart, and billing management.

Smart Campus Hub | Campus Management System (React, Spring Boot, MySQL)

- Developed a full-stack campus management system with React and Spring Boot.
- Implemented JWT authentication and MySQL database management.

Medifind-LK | MERN Stack Medicine Finder Platform

- Built a real-time medicine finder application utilizing React.js, Node.js, Express.js, and MongoDB.
- Developed role-based dashboards, live map integration, and a user contribution system.

Verity Project | AI-Driven Student Project Intelligence & Collaboration Platform

- Developed a full-stack collaboration and project tracking platform for students using React.js and Node.js.
- Designed scalable MongoDB schemas and implemented analytics-driven data management to monitor project progress.

Cosmos-SL | React.js, CSS

- Built a 3D Solar System exploration platform with interactive navigation and time simulation.
- Developed responsive interfaces and real-time animations for planets, moons, and space environments.

Cyber-Guard-SL | React.js, Tailwind CSS, Three.js

- Built a cybersecurity platform with password security analysis, breach detection, and threat monitoring features.
- Developed interactive 3D visualizations and responsive user interfaces for cybersecurity awareness and reporting.

Lifeline Blood Link | Java Web Application

- Developed a secure blood donor management system using Java, JSP, Servlets, and MySQL.
- Integrated interactive data visualizations using Chart.js and built an automated email notification system for real-time donor alerts.

NexBus Mobile App | Kotlin, Android Studio

- Built a bus schedule tracking app using Kotlin and MVVM architecture.
- Implemented local data storage and interactive user interfaces.

Habit Tracker | UI/UX Design Project (Figma)

- Designed wireframes, prototypes, and user flows.
- Conducted user research and usability testing for improved user experience.
